Subject: Breach in security at Gate 2
Date: Mon, 29 Mar 2021 12:30:54 +1100

Dear Directors and members

* John Reid and myself checked the locks on gate 2 , mainly because the electricity metre reader had failed to gain access to the site so as to read the meter .*

* Upon checking the chain and locks on gate 2 we found three locks , one was a DTE lock , the second was the electricity lock with tag and the third lock upon closer inspection had no keyway and could be opened easily with a large screwdriver placed in the keyway to release the latch . (Photo 1)*

* How long has this lock been on the chain .*

* Who might be using it to gain unrestricted access to the site and what have they removed from the site .*

* The fireplace near the Cottage had been damaged recently while Andrew was off site and also on checking how many sleepers were available for the containers only 6 were left in the pile and yet there were more .*

* John Reid came up with a clever solution not only to secure the chain and also send a message to whoever installed the lock , he welded the chain links to the shank of the lock so that gate 2 and the site is now secure . (Photo 2)*

This breach in security was very disappointing !

With love *Kevin* 0408 772 759
