Subject: Jacking up four Containers
Date: Wed, 7 Apr 2021 22:01:42 +1000

Dear Directors and members

* Natalie and myself have just got back to Sydney after spending the Easter break onsite .*

* One of the many jobs I worked on while on site , was looking at some of the containers sitting on the ground and other containers that were placed on sleepers last March (2020) and that have sunk a little into the ground.*

* Working with some of the members of the Veg Out Village and Darrylle Ryan , we used Mark's two truck jacks , DTE's two truck jacks with large bases and my own truck jack .*

* Placing two jacks on each corner at one end of a 20 foot container , then jacking in unison to be able to move the container and also so the jacks did not break with the stress of the load .*

* This was extremely hard and dangerous work , however we did manage to lift four containers , being the Veg Out container , the Asset Management container and both Ops containers - these were easier as they were already on sleepers .*

* The four containers are now sitting on a 2400 x 200 x 75mm Redgum sleeper with one of Scouse's 200 x 180 x 75 blocks screwed on at each end with 120mm screws giving an air gap height of 150mm to start with .*

* The last photo shows one of the First Aid containers with little air space left under it .*

* I have ordered more sleepers and look forward to conducting a mini working bee in the coming months , with the crane to remedy the current situation and ensure the longevity and usefulness of DTE assets . .*

* By the end of this work, we were all extremely knackered - it was very very very physically taxing and demanding work.*

With love *Kevin* 0408 772 759
